EXELPET Enz Stain & Odour will permanently eliminate odours caused by organic matter such as decaying food, urine, faeces, vomit, rodents, etc., more effectively than other products and without the use of harsh chemicals or strong smelling odour maskers. It does this by biodegrading (breaking apart) the odour causing molecules to make the odour permanently disappear.

To eliminate odours, spray directly on the odour causing source, covering the surface of the material. The odour will disappear on contact. Remove the odour causing substance as thoroughly as possible, then spray the location again to eliminate residual odour and to make the stain removal easier. Remember that **EXELPET Enz Stain & Odour** must come into physical contact with the

source of the odour. Blot up the excess moisture for quick drying.

EXELPET Enz Stain & Odour is excellent as a house training aid for pets, eliminating odours that attract pets back to previously soiled locations. It also helps prolong the usefulness of kitty litter, just spray on the the surface after use. For animal odours, spray on and brush into the coat.

EXELPET Enz Stain & Odour will also aid the removal of stains caused by organic matter such as blood, urine, faeces, vomit and grass. However, if faeces or vomit contain any inorganic food colourings, stains from these will not be removed; **EXELPET Enz Stain & Odour** if used immediately, will help prevent these stains from setting.

To prevent staining from organic substances, first remove any solid material. Spray the area, wetting the stain thoroughly with **EXELPET Enz Stain & Odour**. Leave for a few seconds, then rub the affected area with a clean cloth to remove the stain. Stains are best treated immediately, as they are easier to remove before they set. If necessary, in cases of stubborn stains, repeat the process.

GUARANTEE OF SATISFACTION

If you are not completely satisfied with this product, return it to us advising where and when you bought it and we will replace it.
