

Exelpet Intestinal All-wormer Tablets

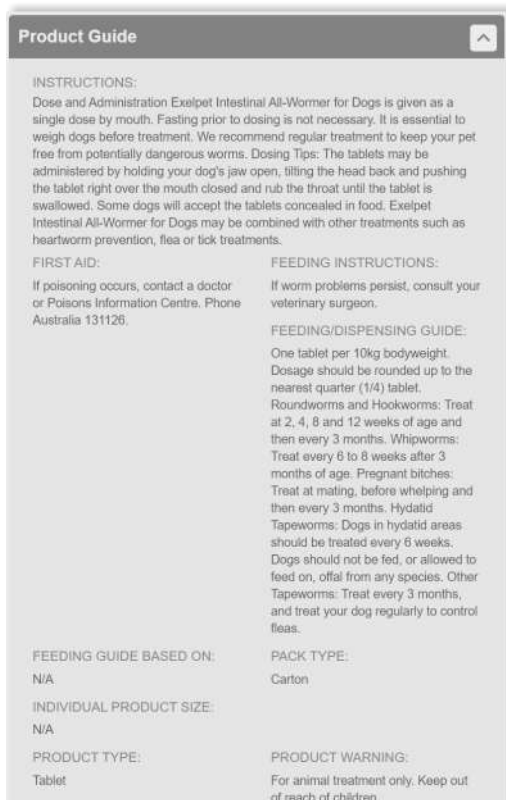

for dogs

Label

Instructions

TREATMENT FREQUENCY:

Dogs can be reinfested with worms from other pets or from their surroundings, therefore treatment should be repeated regularly. Follow the treatment frequency recommendations in the following table and worm all your pets at the same time to maximise protection.

Puppies to 12 Weeks of Age: Treat at 2, 4, 8 and 12 weeks for: - Roundworm - Hookworm. Puppies & Dogs From 12 Weeks of Age: Treat every 6 weeks for: - Hydatid Tapeworm (Dogs should not be fed, or allowed to feed on, raw offal from any species). - Whipworm Treat every 3 months for: - Roundworm - Hookworm - Other Tapeworms

Pregnant Bitches: Treat at mating, before whelping and then every 3 months. This treatment kills worms present in the gut, at the time of treatment. Immature hookworms in the migratory stage may not be affected. In specific cases where infestation is particularly heavy or many dogs are housed together more frequent treatment may be required. If worm problems persist, consult a veterinarian.
